The **EC-1500C Series** is ideally suited for applications where the existing coaxial cable needs to be leveraged for transmission of IP signals. For UTP applications, the **EC-1500U Series** is an effective Cat5/Cat5e/Cat6 UTP extender device beyond the 100 m (328 ft) limit of traditional Ethernet. In addition, for system configurations that have a single cable connected to the camera, the **EC-1500C/U Series** can pass through PoE (up to 15 W) to the camera. Designed to be a cost-effective, general-use product, the **EC-1500C/U Series** provides maximum flexibility in these applications without any programming.

The EthernetConnect™ **EC-1500C/U Series** is used to extend Ethernet over copper (EoC). The **EC-1500C Series** extends up to 16 ports of 10/100 Mbps Ethernet with pass-through PoE over coaxial cable. The **EC-1500U Series** extends up to 16 ports of 10/100 Mbps Ethernet with pass-through PoE over twisted pair Cat5/Cat5e/Cat6 UTP cable. Single-channel units can be powered from a PoE source, allowing for an installed network where power is not readily available.

- Tested and Certified by an Independent Laboratory for Full Compliance with the Environmental Requirements (Ambient Operating Temperature, Mechanical Shock, Vibration, Humidity with Condensation, High-Line/Low-Line Voltage Conditions, and Transient Voltage Protection) of NEMA TS-1/TS-2 and the Caltrans Specification for Traffic Signal Control Equipment
- LED Status Indicators Confirm Operating Status
- Available in Small Unit Size, Interchangeable Stand-Alone, or 1 RU Rack-Mounted Models
- Designed and Manufactured in the USA

The **EC-1500C/U Series** units provide the ultimate flexibility for extending a powered device (PD) over long distance copper. DIP switches are provided for the user to select local or remote settings. All application configurations should be verified at the time of ordering to facilitate ease of installation.

*Distance figures are based on a 50 V PSE PoE power source, and external power supplies for the extenders. Distance figures are obtained using in-house testing mirroring installations. Factors such as coaxial and copper cable quality, the number of connectors and splices in the cable run, the use of PoE, and environmental conditions encountered within the installation might affect the actual transmission distance and should be taken into consideration. Due to advanced negotiation signaling required in IEEE802.3at applications, pass-through applications are limited to IEEE802.3af PD devices only.
