Sensor Fitted to Remote
Junction Box

The Sensepoint RFD is a remote flammable detection system for LEL monitoring applications. The XCD RFD combines the XCD transmitter with the 705 combustible Sensor, and is certified for use in Class I Div. 1 rated areas. The XCD RFD offers one man, non-intrusive, operation and reduces routine maintenance time and costs. The XCD transmitter includes two programmable alarm/fault relays as well as an industry standard 4-20 mA output, with optional Modbus RTU. Calibration and relay operation of the transmitter may be adjusted via the transmitters' backlit LCD. Outputs are automatically inhibited during adjustment thereby reducing the risk of false alarm at the control panel during maintenance.

Sensepoint RFD is supplied with all necessary accessories for easy installation. It can be mounted on a wall or 2" round support pole using the universal bracket provided. The detector is ideal for use with either conduit or steel wire armored cable and glands and includes both 3/4 in. NPT and M20 entries to the junction box.

Sensepoint RFD offers easy installation and fast routine operation. Compatible with both standard and high temperature variants of the Sensepoint and 705 flammable Sensors from Honeywell Analytics the overall flexibility of the product range is increased. Meets Class I Div. 1 UL performance standards.

6. 705

Combustable Gas Detector

The 705 Combustible Gas Sensor is a low cost, explosion proof Sensor assembly, fitted with poison-resistant combustible gas detection elements. Fully encapsulated, it is designed for use in hazardous locations. The Sensor is electro-catalytic and consists of 2 beads of refractory oxide, formed on a fine platinum wire coil. The active bead is coated with a catalyst material, while the reference bead is glass coated. In the presence of gas, the catalyst coated bead promotes the oxidation of the gas, causing it to heat up and increase in electrical resistance. This change of resistance, relative to the reference bead, can be measured and is in direct proportion to the concentration of combustible gas.

Features

- Fast response
- High resistance to catalytic poisoning
- Low cost, high performance design
- Low Powerconsumption
- Accurate, trouble free gas detection
- Corrosion resistant aluminum construction
- Five year warranty

Approvals

- CSA & UL approved (705 HT UL only)
- Class I, Div 1, Groups B, C & D

11. Series 3000

The Series 3000 range of transmitters provide comprehensive monitoring of toxic and Oxygen gas hazards in potentially explosive atmospheres. Suitable for Mounting both indoors and out, they are available in two Versions and offer Searchline Excellent versatility. The Series 3000 MkII is contained in a flameproof housing, has an intrinsically safe Sensor connection and is for use in predominantly Zone 1 applications. However with the use of the optional remote Mounting Kit the Sensor of the Series 3000 MkII can be mounted in a Zone 0 environment. The Series 3000 MkIII is for use with a separate suitable IS barrier (to be ordered separately) allowing the complete transmitter to be used in Zone 0 applications.

These low powered gas Detectors all feature a loop powered 4-20 mA connection, making them ideal for both new and retrofit installations. Users can configure the Detector through the use of the easy to read LCD and intuitive interface while fault diagnostic software and a programmable calibration period greatly simplify maintenance procedures.

The intrinsically safe smart Sensors are supplied pre-configured and can be 'hot swapped' without having to remove Power to the Detector, saving time and money during commissioning and routine servicing. A remote Sensor Mounting Kit is available that allows the Sensor to be mounted up to 50' (15m) from the transmitter, making it ideal for operation in areas that are difficult to access.

Series 3000 MkII and Mk III are supplied with all necessary accessories for easy installation. The Detector has 4 Mounting lugs for surface Mounting or and optional pipe Mounting Kit. Electrical installation can be made using either conduit or Cable with suitable mechanical protection. Available in painted Aluminium LM25 or Stainless Steel 316 with two 3/4" NPT entries or two M20 entries with a suitable blanking plug (certification type dependent) included as standard. A weatherproof cap is also included for use in the harshest outdoor conditions.

Excellent-Performing Technology

- Fast speed of response provides earliest warning of gas release
- High sensitivity allows low alarm set points
- Alignment free design makes installation simple
- Duct flex and vibration tolerance keeps the system online
- Integral functional gas test facility allows for simple system check
- Contamination resistant optics reduce the need for unscheduled maintenance
- Not affected by interference from water vapor
- Immune to catalytic poisons
- Works in inert atmospheres

Why open path gas detection?

Open path detectors complement the use of individual point Detectors and offer many

significant benefits including:

- Wider area coverage — most likely to pick up any leak
- Very high speed of response
- No unrevealed failure modes — no possibility of blocked gas path to detector
- Detector location not as critical
- Indicates size of hazard

17. Searchline Excel Cross-Duct Infrared Flammable Gas Detector

CH₄

Searchline Excel Cross Duct is a Hazardous Area certified infrared open path gas detector, for use in HVAC intakes and exhausts. There are 2 types: Short Range for ducts 1.6 ft – 8.2 ft (0.5 m – 2.5 m) width and Long Range for ducts 8.2 ft – 16.4 ft (2.5 m – 5.0 m) width.

Hazardous area approvals include European (ATEX) and North American (UL). Receiver output is 3 wire 4-20 mA selectable sink or source.

Note: Methane (CH₄) calibration only.

It is important to ensure the suitability of an application for Searchline Excel Cross-Duct before ordering. Target gas can be Methane or gas mixtures where methane is the main constituent

(>70%) and the balance is C₂ - C₆ hydrocarbons. Alarm levels should be set at 20% LEL for the short range unit and 10% for the long range unit. The installation must be made where it is protected from dirt and condensation. Regular routine maintenance should include cleaning the reflector tiles, re-zeroing and functional test using the test filters. If in any doubt about suitability for an application, contact Honeywell Analytics Engineering Team for further guidance. Hazardous area approvals include European (ATEX) and North American (UL). Receiver output is 3 wire 4-20mA selectable sink or source.

22. FS10 Fire Detection Systems

For Liquid Paint Spray and Electrostatic Powder Coating

A high-speed microprocessor based fire detection and process control system specially designed for liquid and powder coating applications, the FS System 10 quickly detects the presence of a flame, reacts by initiating a shutdown of the electrostatic finishing process in a matter of milliseconds; and effectively interrupts the fire before residues and wet paint films can ignite.

The FS System 10 is the only system that provides a two-stage response: an ALERT for spray gun "fireball" type fires and if the fire continues, a FIRE ALARM is declared in 4-5 seconds.

90° field of view and detection range of 15 ft.

Features

- Multi-Spectral digital electro-optical infrared fire Detector
- Meets requirements of NFPA 33
- Unique two-stage ALERT and FIRE ALARM response
- Immune to false alarms caused by arcs or corona discharges
- Built-in automatic "through the lens" self-test
- Not sensitive to background radiant energy sources such as paint heaters
- Not affected by absorbing smoke or paint solvent mist in liquid pant spray booths
- Sees through paint, powder or oil residue on Detector's lens
- Digital communications with RS-485 interface

Certifications

- Explosion-Proof; Class I, Div. 1 & 2, Groups B, C, & D Class II, Div. 1 & 2, Groups E, F, & G, Class III
- FM, CE

23. FS7

Multi-Spectrum Fire and Flame Detector

The Fire Sentry FS7 Flame Detector provides an intelligent two-stage response to semiconductor wet bench fires:

Stage 1: Alert. This is the first-stage response to a small fire with a heat energy output of 3 kW (the equivalent of a 4-inch diameter polypropylene pool fire). This fire may self-extinguish.

Stage 2: Alarm. If the fire does not self-extinguish, and grows to the Factory Mutual specified heat energy threshold of 13 kW (the equivalent of an 8-inch diameter polypropylene pool fire), the second stage response is activated.

The Fire Sentry FS7-2173 is used with Fire Sentry FS7-130-SX Controller. Controller supplies power to detectors monitors the status of all detectors and communicates with the detectors via the digital RS-485 communication channel. Fire Sentry FS7-2173 is supplied with a standard 20 ft. cable connector. Detectors are connected to the controller using the self-locking connectors and Fire Sentry junction boxes. This allows for fast and easy connections eliminating wiring problems. Each detector can store up to six time and date stamped FirePics™ (pre-event multi-spectral sensor array data) in non-volatile memory. Controller can also store event history table in the non-volatile memory, which contains the time and date stamped alert, alarm and fault histories. FirePics™ and event histories can be retrieved from the controller.

27. Series FSL100 Flame Detectors

The new FSL100 series is the latest generation range of Mid market Flame Detectors from Honeywell Analytics. The range consists of UV, UVIR and IR3 flame detectors. All utilize sophisticated sensing and signal analysis to detect fires quickly while also rejecting false alarms. The FSL100 may be small and lightweight for easy installation but they are designed to work in tough environments both in and out of doors as well as potentially explosive atmospheres. With a large field of view they can detect a range of different types of fire including hydrocarbon and non hydrocarbon sources.

Note: A swivel mount should be ordered with each Flame Detector.

30. Honeywell Analytics Touchpoint Pro Gas Control System

The Touchpoint Pro Gas Control System is a safe area, modular flame/gas detection control system.

Any Touchpoint Pro gas control system can be built from just four main building blocks:

All four blocks can be mounted easily in 19" racks, wall mount enclosures or floor standing cabinets. Ideal for centralised and distributed system and designed for ease of expansion. The Touchpoint Pro controller can also be used standalone or integrated into a gas and fire system packaged.

Touchpoint Pro is an intelligent controller that accepts inputs from flammable and toxic gas detectors and output devices like strobes or valves.

Available outputs include relays and industry standard digital protocols. Easy plug-in Input Module types are Analogue Input Module mV Bridge, Analogue Input Module 4-20mA and Digital Input Module. Available output module types are Relay Output Modules.

The Touchpoint Pro system is easy to install and to configure. The channels can be configured by using the touch screen user interface or optional TPPER PC Configuration Software. A preloaded Sensor Catalog includes all relevant parameters of the Honeywell Analytics' devices. Only three parameters must be programmed and the rest will be loaded automatically.

40. SPM Flex Chemcassette® Tape-Based Gas Detector

The SPM Flex, the next evolution of our SPM and TLD gas Detectors with Chemcassette® tape technology, is capable of working as both a fixed and a portable unit. The monitor detects the ultrasensitive gases inherent in your operations, including hydrides, mineral acids and amines.

Our Chemcassette tape technology shows the presence of gas quickly and definitively with a physical record. So you can prevent costly downtime from false alarms.

To order a complete system:

1. Select Base Unit (Section 1)
2. Chemcassette tape(s) per calibration (Chemcassette Section 2)
3. Select Base Unit Options (Section 3)
4. Select Accessories and Installation Items (Section 4)

40.2 Chemcassette Tapes

Chemcassette tapes are individually formulated for a specific gas or family of gases. Each Chemcassette tape is a proprietary chemical reagent system that acts as both a trapping and analysis medium, detecting and measuring ppb/ppm amounts of target gas with excellent sensitivity and response speed. Each Chemcassette tape is gas tested to assure proper response when installed in-field in a Honeywell Analytics/MDA Scientific gas Detector.
