Direct-Select Nurse Call Systems for Assisted Living Long Term Care • Nursing Homes Health Care Related Facilities

NC200, NC150 and NC110 master stations are modular for custom configuration, while the NC110A master station accommodates up to 50 remote stations. Three call levels allow for routine, emergency, and code or fire indications. All Tek-CARE® systems are UL® 1069 listed.

Tek-CARE® NC200 and NC150 are audio-visual nurse call systems that provide two-way communications with patient rooms. The direct-select master stations have lighted buttons for each remote station, and include the Staff Follow function for increased staff mobility. The desk-mounted NC200 also includes 10-station Group Call, enabling paging through the nurse call system. The NC150 may be wall- or desk-mounted.

Tek-CARE® NC110 nurse call system provides audible and visual call indication without intercom communications. The NC110 master annunciator station has lights for each remote station, may be used as a remote annunciator for NC200 and NC150 systems, and may be wall- or desk-mounted. The small, desk-mounted NC110A master annunciator has LEDs for each remote station, and is water-resistant.
