

IP Blue Strobe

Valcom's IP Blue Light Strobe is designed for outdoor use, but is equally suited for indoor locations such as gymnasiums and manufacturing facilities. The highly visible strobe enhances your ability to notify individuals of hazardous situations. The strobe's construction allows it to be placed on exterior walls above entrances to alert people that it is not safe to enter, as an evacuation signal or to guide First Responders to a location. If placed on the interior of your Organization, the Blue Light Strobe provides suitable signaling for evacuations, lockdowns or hazardous work conditions. The Blue Light Strobe can be synchronized to other strobes in your facility, and when paired with Valcom's IP6000 communication software, it works seamlessly with other Valcom endpoints to enhance your notification platform so people can stay safe and informed.

Built-in mounting plate
no backbox required.
