

Wiegand Test Unit for SARGENT Harmony Series and Profile Series v.N1

Designed for compatibility with SARGENT Harmony Series and Profile Series v.N1 locks and other Wiegand output devices, the ASSA ABLOY Wiegand Test Unit (WT1) is a user-friendly tool that allows one to provide a product demonstration highlighting the products' features and capabilities.

In addition, this tool is great for troubleshooting in the field. The test unit checks for proper wiring, card reader data integrity, lock functionality including lock/unlock, door position status, and request-to-exit, or REX, and status.

Features:

- 12 or 24VDC solenoid lock voltage adjustable
- Operates in Fail Safe or Fail Secure
- "Learn" mode allows testing of specific cards without programming at the panel level
- Card reader data integrity is validated at test unit

Available through Authorized Channel Partners only. No buying program discounts will be issued at this time. All pricing will be handled via special quotation.

Orders will be accepted immediately and will be shipped within standard lead times.

Please distribute this bulletin to everyone in your distributorship who specifies and/or purchases SARGENT access control products. Insert this bulletin in the Access Control section of your full line catalog, and the price page in the April 2008 SARGENT Price Book.
