Spider Spool
Fiber Management Spool

1. SUMMARY

The Primex 'Spider' Fiber Management Spool is designed to route, manage and store fiber within Primex enclosures. It easily installs and provides bend-protected fiber management in diameters up to 3mm.

These spools are stackable for scalability and are available in either standard, or in the Quick Release Fiber Spool version. The Quick Release version allows for the easy snap-in mounting of the Primex 12 or 24 fiber splice trays.

They easily separate in the middle for increased spooling capacity. Pair with other Primex accessories for complete cable management with an enclosure.
