- Residents can be listed with or without names or suite numbers (for privacy purposes)

SW-ALENTY5 ALPHAENTRY™ SOFTWARE

(US Patent 7,783,018)

The Alpha Communications® SW-ALENTY5 v5 AlphaEntry™ software is used for a variety of entry and calling intercom, telephone, VOIP and emergency-call applications.

This AlphaEntry™ software can be used on virtually any Windows® based PC for a lobby entry, or concierge / security desk application, or both. The patented software allows a visitor or staff member to call to remote locations using telephone lines, or intercoms or video-intercom stations, and can be inter-mixed for up to 6 different calling methods (an AlphaEntry™ exclusive). An encrypted activity log stores all relevant system activity (along with optional video images), for future reference. Call signaling is accomplished with user definable .wav files at the AlphaEntry™ master station(s).

When used as a building entry type system, the software has a full access control module, allowing individual resident and staff access codes, with qualifiers such as dates, days of week, times, etc.

When used as a concierge or front desk type system, the software has a full package tracking and notification system built in with the ability to send emails, or text messages when a package is received. In addition, when used in conjunction with the Alpha Communications® / STR™ QwikBUS™ components, the software can turn the system into a complete 2-way intercom and emergency calling system, an AlphaEntry™ exclusive.

The software can be used in its basic format, or can be upgraded for a small yearly fee to the Premium version, allowing for resident and staff web access, the addition of an AlphaEntry™ software client for the residents and staff, an optional Apple® iPhone app®, VisitorVerifier™ and QwikCAM™ live color video, PinkNotes® building instant messaging, and much more. Other options include AlphaEntry™ Mailroom™ display(s), switch console relay controls, electric door release(s), and much more.

- Switch Console relays can control low-voltage devices in Timed, toggle On/Off or Momentary modes
- Can be used to call older analog type intercom and/or videointercom type stations and devices
- QwikCAM™ remote security camera viewing
- Built-in instant messaging system a resident and/or staff member
- All calls to concierge/security desk are logged and stacked in a queue (QwikID™) - now with photo option
- Emergency calls can also activate remote signaling devices, pocket pagers, send emails or text messages to family and/or staff
- Can report calls to Central Station (requires additional hardware and services)
- Supports images of residents and/or staff for calling recognition
- Settings can be made locally, remotely, or over the internet and are multi-level password protected
- Optional Apple iPhone and Android app (coming soon)
- Transfer calls to and from Lobbies to Concierge(s)
- Works with a variety of STR™ QwikBUS™ intercom and video-intercom stations and devices
- Works with a variety of VOIP intercom stations and devices
- Concierge can call using Resident, Staff, Emergency or Off Premises display tabs
- Resident phone numbers are hidden from view (private)
- Connects to optional Connect2Doorman™ remote doorman service or those provided by others
- Fully integrates with optional AlphaNotify™ mass notification service
