

The ComNet™ CNGE2FE4SMS[POE][HO] is a six-port self-managed switch with uplink management functionality and provides 4 copper ports operating at 10/100 Mbps and two Gbps optical SFP* ports. It is designed to combine four electrical ports and one Gbps SFP port into one of two optical SFP ports. The CNGE2FE4SMS[POE][HO] SFP ports forwards this data to the next network device or can be configured for drop and insert operation. The CNGE2FE4SMS[POE][HO] uses ComNet SFPs for connector and distance options. There is no programming required to use this product. The ComNet CNGE2FE4SMS[POE][HO] comes pre-programmed, preventing network video flooding with dip switch selection of fiber ports as uplink or as an unmanaged switch. Ports 1 to 4 can supply up to thirty (30) watts of power ("Power over Ethernet") per port based on the IEEE 802.3at standard. An optional High Output (HO) version is also available that can supply up to thirty (30) watts of PoE from ports 1 and 2 and up to sixty (60) watts of PoE from ports 3 and 4.
